

**KINETIC
SCHEDULE**

Immediate visibility into resource
availability for conflict-free scheduling.

Kinetic Schedule is a resource schedule calendar that gives immediate visibility into available resources and makes conflict-free scheduling easy. With Kinetic Schedule, you get centralized visibility into the schedule availability for technicians, specialists, repair people, mechanics, equipment, meeting rooms and any other resource type. View resources and events in a customizable calendar and link directly, through a Web interface URL, to any allocated event. Or, create a new event for a resource and integrate it with any source application.

Lower your costs by providing more efficient and quicker customer service.

- Avoids resource-scheduling conflicts.
- Quickly and easily manages resource scheduling, no matter where resource data resides.
- Enables businesses to respond immediately to their customers' needs.
- Provides immediate visibility to multiple data sets in one view.
- Allows customization of its Web interface through specific theming.
- Easily integrates with existing database or API data sources.
- Delivers superior customer service.

KINETIC DATA

235 East Sixth St., Suite 400
Saint Paul, MN 55101

Call: 651-556-1030
Email: sales@kineticdata.com
Website: www.kineticdata.com

Get a clear Web-based view of resource assignment.

See when and where resources are available. Create, edit, reallocate or reschedule events with absolute confidence. Link to an event record in any Web-enabled application.

Scheduling your resources has never been easier!

Schedule, track and view tens of thousands of resources. Easily select the group of resources right for the task by filtering the list by location, cost, skill, or any data related to your resources.

What makes it different?

- Draw events from any existing database or API data source application and combine them into one calendar.
- Combine change-task information from any ITSM suite with personnel roster information from any HR application to schedule changes.
- Drill down and filter to view any resource information you need. Filters can be easily customized--location, skill level, certification, availability and much more.
- Open a Web link to the source application to reassign, reschedule, edit or create an event.

Schedule Usage Examples

- On-site repairs that require specifically skilled and certified people;
- PC refreshes so that the task can be performed on the first visit;
- Equipment rental by manufacturer, model, location and company;
- Meeting rooms with the right equipment and amenities.
